

Annual Report 2023

The Medical Society Consortium on
CLIMATE & HEALTH

Director's Note

The Consortium's defining word for 2023 was collaboration. We started a new initiative with the National Association of Community Health Centers to help ensure Federally Qualified Community Health Centers (FQHCs) will be sites of climate resilience in the face of worsening climate disasters. We created a new memorandum of understanding to work with Health Care Without Harm on leveraging our state network to achieve national goals on climate-smart health care. We joined coalition efforts led by the American Lung Association and Climate Action Campaign to gather thousands of public comments from health professionals in favor of strong rules from the Environmental Protection Agency to curb fossil fuel pollution. We've created a partnership with MedPage today to create a new, regular, and ongoing column on climate and health to educate its readership on important climate actions we can take. And finally, our Annual Meeting in 2024 will take collaboration to a whole new level: we've invited in 12 major climate and health organizations to jointly plan this meeting as we seek to build a health coalition that will empower our movement to make a difference during a critical year for civic engagement.

To improve ongoing member and network collaboration, we took on the task of restructuring our Steering Committee. To allow for streamlined contributions and guidance from our member societies (we are now up to 51 members!) we created an executive committee and four subcommittees. Our new structure also brings in our state clinician network, who have often been at the forefront of climate, health, and equity policy on local and state levels. Taken together, our new executive, subcommittee and state network structure will allow us to better leverage our capacity to deliver important projects and programs at speed and scale.

The Consortium also adopted a new membership model this year to invite more advocates in and help ensure our financial sustainability for the work that lays ahead.

We cannot overstate the importance of 2024 for climate action. Our voice has been credited with being an important factor in driving significant gains in the transition toward renewables and away from fossil fuels. Our message – that fossil fuels are the common enemy of our health and our climate – is resonating. The disasters that occurred in Lahaina, Canada, and Phoenix, to name a few, reminded us that the crisis is unfolding rapidly and we don't have a moment to lose. But if we're going to accelerate the pace of progress, we'll need to win new battles, including protecting regulations to reign in fossil fuel pollution and ensuring full funding for the Inflation Reduction Act.

Working together, we will make sure health professionals' voices are heard loud and clear in support of a rapid transition toward a healthier and more equitable future. Let's make 2024 the year we turn a 6 foot wave of climate action into a 50 foot Mavericks for change. Thank you for all that you do!

Lisa Patel, MD, MEdSc, FAAP
Executive Director

Mission/Strategic Priorities

Our vision

A world in which people and communities are empowered to thrive, now and for future generations, through equitable climate action.

Our mission

The Consortium mobilizes health professionals to address climate change as a health and equity crisis.

Our strategic priorities

1

Grow and diversify the climate movement

The Consortium started in 2017 with 6 medical societies and has rapidly expanded to 51 which now represents over 700,000 physicians around the country. We started with two state clinician groups and are now a powerful Climate and Health State Network of 25 state groups who organize at the local and state level to engage their communities and decision-makers on climate solutions. We will begin our 4th cohort of the Climate, Health, and Equity Fellowship (CHEF) for doctors of color in 2024 and will launch a new full time fellowship in collaboration with National Oceanographic and Atmospheric Administration (NOAA).

2

Foster collective action

We work to ensure that health professionals' voices are heard when and where climate solutions are debated and decisions are made by providing year round peer groups, mentorship, and training. With our diverse and large network, we are able to convene experts on needs such as meeting with decision-makers for key regulatory decisions, formulating policy recommendations, and developing educational materials on climate, health, and equity.

3

Ensure climate policy is grounded in health and equity

Research consistently shows that the health message is the most resonant to catalyze action. We craft talking points, recommendations, and training opportunities that ground our policy recommendations on climate change in health and equity.

Revenue/Expenses: \$1,299,171.00 } \$966,633.22

Annual Meeting

In 2023, we hosted our first hybrid Annual Meeting, which was a huge success. It featured keynote speeches by John Podesta, Senior Advisor to the President for Clean Energy Innovation and Implementation and Dr. Jalonne White-Newsome, Senior Director for Environmental Justice for the White House Council on Environmental Quality. We convened 120 health professionals in-person and 140 participants virtually. To close out the meeting we brought 86 health professionals to Capitol Hill for 85 Congressional meetings representing an impressive 26 states. Health professionals asked their congressional members to support strong rules for soot pollution.

Finally, our Executive Director participated in a press event with Senator Tom Carper to highlight the importance of strong rules from the EPA to curb pollution from the burning of fossil fuels.

Advocacy/Policy

As trusted messengers for the public and policymakers, health professionals can help reframe debates on critical policies such as those in the Farm Bill to find a better path forward.

Lisa Patel, M.D., M.E.Sc., and Linda Rudolph, M.D., M.P.H.

The Medical Society Consortium on
CLIMATE & HEALTH

NATIONAL ASSOCIATION OF
Community Health Centers

1

- We leveraged our state clinician network in conjunction with Healthcare Without Harm. By mobilizing more health professionals, we helped increase sign-on to the climate-smart health sector pledge by the Department of Health and Human Services.

2

- We provided health and evidence-based guidance to our network, supporting advocates in submitting comments to the Environmental Protection Agency on reigning in fossil fuel pollution. In all, we mobilized thousands of written comments throughout the year to weigh in on important rule-making.

3

- We collaborated with the National Association of Community Health Centers to improve community resilience for their patient populations, of which 90% have limited income, 20% are uninsured, and 65% are people of color or ethnic minorities. New patient-facing materials and an advocacy toolkit for health professionals will help accelerate change.

4

- We crafted policy recommendations for the Farm Bill and had 40 climate and health organizations sign on. Our policy recommendations were also published in the New England Journal of Medicine.

CHEF Fellows

CLIMATE &
HEALTH
EQUITY
FELLOWSHIP

The Climate and Health Equity Fellowship is a one-year program that trains health professionals to work in climate change and health equity, develop climate adaptation plans, and advocate for climate change policies. The Climate and Health Equity Fellowship will be commencing its 4th cohort of fellows next year. We are also pleased to announce the launch of the Policy Experience in Equity and Climate Health fellowship in 2024.

Our impact

We've trained over **30 doctors** of color to become leaders in climate, health, and equity. Our graduates have gone on

to assume leadership positions within their medical societies and the state clinician network and continue to provide expertise through research, media, and education on climate, health, and equity.

The Policy Experience in Equity and Climate Health fellowship is a full time program that trains health professionals to work in climate change, health equity, policy, and advocacy. Fellows are placed with a federal agency, develop community initiatives, and learn about the intersection of climate change and health equity. They also learn how to develop climate change policies that address health equity, and how to advocate for

those policies. Our first placement is with NOAA. Both fellowships are designed to train a new generation of leaders who are committed to addressing the health impacts of climate change.

We have also launched the CHEF Alumni Engagement Network (CAEN). The CAEN network represents more than thirty diverse physician voices in climate, health, and health equity. The members of this vibrant network are involved in advocacy efforts, education, networking, and speaking activities nationally and internationally. We're proud of our 2023 graduates and excited to continue growing this network!

Our CHEF Fellows

Dr. Alfred Glover | Podiatry | Los Angeles, CA

Inspiring the next generation of climate justice warriors by creating, teaching, and mentoring a student-led organization of Climate Justice Health warriors at CRDU Schools.

Dr. George Crawford | Surgery | Anniston, AL

Designed a how-to guide for the electrification of school buses for climate and healthcare professionals.

Dr. Earl Stewart | Internal Medicine | Smyrna, GA

Developed an electronic health record toolkit with guides on climate change and health that improve patient and clinician knowledge and use.

Dr. Brianna Clark | Family Practice | Kingwood, TX

Evaluated the effect of heat on pregnancy and lactation – A study on the response of milk production in relation to extreme weather, specifically extreme heat in humans.

Dr. Julian Watkins | Internal Medicine | New York City, NY

Developed a scalable blueprint for Community Climate Health Equity Resilience Programs at local health departments.

Dr. Esmeralda Morales | Pediatric Pulmonary Medicine | Palo Alto, CA

Established a Climate Change Commission within the National Hispanic Medical Association to develop a process and framework for policy and advocacy of climate and health equity issues within the Association.

Dr. Cheryl Holder | Internal Medicine | Pembroke Pine, FL

Developed a clinician's guide to climate change and health with patient brochures, social media sites for climate change, health and equity information (list of sites, apps, etc.).

Dr. Marcos Moreno | Psychiatry | New Haven, CT

Researched and authored a publication discussing modern-day impacts of climate change: Navigating Climate Change Impact in Native American Communities.

Dr. Valeria "Dee" Hairston | Podiatry | Germantown, WI

Developed a framework for a statewide Food RX program for FQHCs to provide greater access to healthy food by expanding a local program.

Dr. Denise Powell | Pediatrics | Bay St. Louis, MS

Developed and administered a population survey to ascertain, knowledge base, needs, resources and solutions in climate change and health equity of physicians for three regions of Mississippi.

Dr. Marcus Kawika Iwane | Internal Medicine | Kapolei, HI

Mauli Ola—Ancestral Knowledge and the Power of Healing by developing a guide for healthcare organizations to engage the community by incorporating culturally grounded programs and community partnerships using Indigenous knowledge.

Dr. Anna Lizama Clark | Obstetrics and Gynecology | Orlando, FL

Created a website with information concerning the effects of climate change on pregnancy and women's health, and ways to mitigate problems and promote optimal health.

Communications

In 2023, the Consortium significantly expanded our reach and digital communication presence to meet the needs of a growing movement and to fortify our network's standing as an influential voice for climate and health.

At the beginning of the year, we initiated the process of redesigning our website and refreshing our brand identity. We sought to enhance user experience, make our vital resources more accessible, and foster a more engaging and impactful platform for our community. The newly-designed website, created in partnership with Huckleberry Branding, went live in December.

Alongside our communications partner, Burness, we led a six-part training series this summer to help our advocates sharpen their strategic communications skills and public voice. Out of this training emerged a cohort of diverse, knowledgeable Climate Communications Champions around the country ready to engage with the media, the public, and policymakers to convey the importance of addressing climate change with equitable, health-focused solutions from their localized perspective on the ground.

We also launched a new collaboration with MedPage Today in December to amplify diverse health voices. "Climate Checkup" is a monthly column that features fresh perspectives on climate and health from Consortium experts. The inaugural op-ed, written by Executive Director Dr. Lisa Patel, explored the role health professionals should play in holding the oil and gas industry accountable.

Session 3: Implementation, Education, and Advocacy

Marcos A. Moreno M.D.

Leaders from the Consortium are regularly asked to provide their expertise for events such as the New England Journal webinar series of fossil fuel pollution, the Lancet Countdown, and New York Climate Week pictured above.

There's no time to waste.

We're mobilizing health voices for climate action.

Your voice can spark climate action. Join us to create a just, sustainable, and healthy world for generations to come.

BECOME A MEMBER

TAKE ACTION

We launched a new website to enhance communications with our members

Our Impact:

- In 2023, we launched a **6 course media training** that resulted in **50 climate communications champions** throughout the country who can serve as local experts on climate and health.

- We have sent over **7,000 communications** to lawmakers and participated in **784 meetings** with members of the US Congress and their staff.

- Our media reach ranges from the local to national with over **2 million social media impressions**, **200 op-eds placed**, and **325 media mentions and interviews** including in Washington Post, The Hill, Today Show, CNN, and NPR.

States

The Climate and Health State Network (CHSN) is made up of 25 state-level organizations working to organize, train, and mobilize health professionals around the health impacts of climate change and the health benefits of equitable climate action. As the climate and health movement grows across the country, the Climate and Health State Network has been a significant mobilizing force. In 2023, our state affiliates expanded critical education programming, deepened their organizing capacity, and ultimately leveraged their trusted voices for major legislative and regulatory wins in renewable energy, clean transportation, and environmental justice. The Network itself continued growing this year with Connecticut, Nevada, and New Mexico launching new groups with the support of Consortium staff and peer mentors in the Network.

Our Impact

This was a landmark year for the Network in terms of cross-state collaboration and collective strategy and power building. In addition to creating a peer-learning structure for sharing best practices and discussing challenges, the Network launched two different working groups: one with a focus on climate-smart healthcare, and the other on fossil fuel infrastructure. The working groups came together to coordinate advocacy efforts; the collaboration has resulted in plans for campaigns poised to supercharge both state and national climate and health advocacy in 2024.

Florida Clinicians for Climate Action (FCCA) partnered with Miami Dade County to provide climate change and heat prevention education to health care providers and patients, with a focus on federally qualified health centers and safety net hospitals. This included a four hour climate and health certificate training program for students and professionals and a nine-part CME webinar series on heat and heat illness, accessible to all Florida clinicians. FCCA also supported the development of a climate and health community practicum for medical students. The group continued advocacy efforts around electric vehicles, heat standards, sugarcane burning, and leveraging federal funding opportunities for climate and health equity in Florida.

New Mexico Health Professionals for Climate Action (NMHPCA) launched in January of 2023 with a group of six diverse, passionate and dedicated health professionals committed to bringing the health voice to strengthen the climate movement. During their first year, NMHPCA grew to a membership of 100 clinical and public health professionals and students. The group co-led a policy initiative to establish a state Climate and Health Program and a Public Health and Climate Resilience Fund for local communities, advocated for a state occupational heat standard for all workers, and played a key role in testifying in favor of the Advanced Clean Cars and Trucks rules that were adopted in November.

Michigan Clinicians for Climate Action (MiCCA) worked with a broad coalition of environmental, justice, and energy organizations within the state to support the passage of a historic package of clean energy legislation, including a 100% electricity standard by 2040. In the fall, MiCCA launched a campaign to support the development of clinician-led advocacy groups within various hospital systems working to decarbonize and improve resilience with input from their local communities. MiCCA also supported advocacy around the Enbridge Line 5, the HHS Health Sector Climate pledge, and the Farm Bill.

New Hampshire Healthcare Workers for Climate Action (NHHWCA) worked to draft legislation requiring the New Hampshire Department of Health and Human Services to focus on monitoring and responding to climate impacts on health. Since the group launched at the end of 2021, they have conducted 85 Speakers Bureau presentations given to a variety of audiences totaling over 2,000 attendees. NHHWCA also worked to embed climate and health curriculum in national nursing education standards, and presented on climate and health to various nursing schools across the state.

California's Climate Health Now (CHN) worked in coalition to pass a bill for all new school buses purchased or leased in California to be zero-emission by 2035, coordinating 17 meetings with state legislators over 8 weeks with 56 CHN members participating. CHN also launched their Healthcare Sustainability Fellowship, which will provide intensive coaching for up to 7 teams of health professionals across California to plan and carry out specific projects related to healthcare sustainability, including improving energy efficiency, sustainable food procurement, and reducing waste.

OUR SPONSORS AND DONORS

ORGANIZATIONAL FUNDERS:

Our work would not be possible without the generosity of our sponsors and donors and our home institution, George Mason University

In addition to the major organizations above, we are grateful for the support provided by Gordon and Betty Moore Foundation, University of Colorado, University of Wisconsin, Mona Sarfaty and Jay P. Siegel, American College of Physicians, Clayton Baker Trust, American Public Health Association, ecoAmerica, Trust For Public Land, Health Care Without Harm, National Association of Social Workers, Research! America, Natural Resources Defense Council, Pediatric Associates of Alexandria Inc., MITRE Corporation, My Green Doctor Foundation, Yale Center on Climate and Health, and Natural Resources Defense Council.

We would also like to thank Mason's College of Humanities and Social Sciences, which supports our work with vital resources, including office space, utility costs, human resources, development, event, and salary support. Furthermore, we are endlessly grateful for the generosity of hundreds of individual donors throughout the 2023 calendar year.

THANK YOU!

Become a Member

This year, the Consortium launched a new membership model to make our community more cohesive, collective, and powerful. Through our membership model, the Consortium can show the strength of our numbers to our decision-makers and the public, connect more easily and effectively with one another on projects and ideas, and raise the funds we need to ensure our sustainability and better nurture and support our growing network.

Join us as a member to become part of our community and to show your support for our mission. As we build this movement, every dollar matters and every new member helps power us forward.
